ShuffleSet by Arpit Ahuja

	Urgent	**Not Urgent**
Important	**Do - (Your MVP)** ● Using the app through the terminal. ● Using a pre-made CSV through a 3rd party service with BPM, key,energy. ● Simply returning a txt file of how the songs should be ordered. ● A simple, rule-based transition tip for each pair, based only on data you already compute. ● Giving a summary of the set list including, most used key, BPM, energy level, artist, song length etc.	**Schedule - (For V2.0+)** ● Cool GUI showing list getting reordered live. ● Suggesting songs that the DJ could add. ● Use voice commands to remix whenever and show the txt, as well as what song to play next. ● Adding a search feature where the DJ can add songs to the CSV by putting the name of the song in and instantly re-optimizing the set list. ● Detailed fade instructions (timing in bars, EQ, effects).
Not Important	**Delegate - (Use a library)** ● DJ synching his entire playlist in. ● Allowing listeners to suggest songs or set list changes before a concert, if the user is an admin role then they can edit it themselves.	**Delete - (Cut it)** ● Having a jam feature where other users can add songs to the setlist. ● Giving every DJ a public profile. ● Automatically hearing a song and adding it to the CSV of songs. ● System taking into account DJ's existing remix style.
